Changes in operations of insurance institutions

Number of insurance companies and local mutual insurance associations

In 2010, the number of Finnish insurance companies remained unchanged, while that of local mutual insurance associations fell from 88 to 70.

Foreign insurance companies operating in Finland

On 31 December 2010, 24 foreign insurance companies had an agency in Finland. By the end of 2010, 610 companies had been entered into FIN-FSA's register of foreign insurance companies after having submitted a notification of starting free supply of insurance services.

Insurance brokers

On 31 December 2010, 65 companies and 199 persons had been entered into the register of insurance brokers.

Separate statistics on insurance brokers have been published under the heading Insurance brokers 2010 on FIN-FSA's website.

Quality Report of Insurance Companies' Statistics

Relevance of Statistics

The Insurance Companies' Statistics contains confirmed financial statement data (from profit and loss accounts and balance sheets as well as the accompanying notes) for all life and non-life insurance companies, including authorised pension insurance companies. In addition, the statistics for non-life insurance companies include insurance line-specific specifications, and for life and authorised pension insurance companies, specifications of premiums written, claims incurred and the insurance portfolio. They also contain the same data for local mutual insurance associations, combined as for non-life insurance companies. Finnish insurance companies' foreign insurance business is also included in the figures, and the EU's regulations on financial statements and statistics have been observed in formulating the data content. The statistics do not include the insurance operations of foreign companies in Finland.

The statistics for authorised pension insurance companies include the financial key figures and analyses presented in the notes to the financial statements, which are published on the Financial Supervisory Authority's website. The key figures are presented as series of yearly totals covering the last five years.

Under the Act on the Financial Supervisory Authority, the activities of the Financial Supervisory Authority are aimed at ensuring financial stability and the necessary smooth operation of credit, insurance and pension institutions, and other supervised entities, so as to safeguard the interests of the insured and maintain confidence in the financial markets. In order to attain this objective, the Financial Supervisory Authority is responsible, for example, for collecting and regularly publishing comparable data on financial market participants' financial position and otherwise contributing to access to information on financial services and financial market activity. According to the Finnish Insurance Companies Act, the Financial Supervisory Authority may publish statistics and comparable data on the operations, financial position and development of insurance companies, compiled on a joint basis for all insurance companies.

The statistics published by the Financial Supervisory Authority support its supervisory objectives. The publications act as public inspection tools, and the insurance company-specific statistics in particular promote the realisation of healthy competition. Statistical information related to the conduct of statutory insurance business by insurance companies plays an enhanced role in this context. In addition to being used internally within the insurance industry, the Insurance Companies' Statistics provide information, for example for authorities, political decision makers, researchers, labour market organisations, consumers and the media.

The Insurance Companies' Statistics are part of Official Statistics of Finland (OSF). In connection with this data collection, the Financial Supervisory Authority also collects statistical data on insurance services for Eurostat, intended for the EU's structural business statistics.

Process Description of Statistical Research

Insurance companies and local mutual insurance associations are required to provide the Financial Supervisory Authority with data on their financial statements and the accompanying notes, as well as other necessary statistical data, for supervisory and statistical purposes according to the Authority's regulations. This information is transmitted to the Authority on a standard spreadsheet available from the Authority's Internet pages. The Financial Supervisory Authority enters the data into its supervisory and statistical database, from which these statistics are produced.

Correctness and Accuracy of Data

The information in the publication is mainly based on data presented in the insurance companies' and local mutual insurance associations' financial statements, ie their official and audited financial statements. The Financial Supervisory Authority receives all statistical data electronically in a specified format and automatically verifies the correctness of the data by, among other things, comparing different data, using specific IT programs. Should errors occur, the insurance company concerned is asked to send a corrected file. The statistics are generated from the database after any errors discovered during the verification process have been corrected.

Timeliness of Data

The statistics are published once a year, towards the end of the year following the year under review, in their final form, depicting the data for the entire year under review.

Availability of Statistics

The Insurance Companies' Statistics are published on the Financial Supervisory Authority's website in Finnish, Swedish and English.

Comparability of Statistics

The Insurance Companies' Statistics have been published since 1892. They include financial statement and insurance portfolio data covering all Finnish insurance companies. Hence, they provide a comprehensive overview of the operations of insurance companies. The content of the statistics has changed very little since 1995, allowing the compilation of comprehensive sequential totals.

Five-year financial key figure totals for authorised pension insurance companies were published for the first time in 2004. This data is presented with the same content as in the authorised pension providers' financial statements. These sequential totals significantly enhance the reader's opportunity to perform reliable comparative analyses, since a time-span of one year is often too short for the proper inspection of financial key figures. If the content of a key figure has changed, its content is compiled for the years prior to the change as required in the financial statement of the year in question.

Clarity, Integrity and Consistency of Data

Some sections of the data contained in the Insurance Companies' Statistics are consistent for all insurance companies: the data on life insurance companies is mutually consistent, as is the data on authorised pension insurance companies and that on non-life insurance companies.

Besides the Financial Supervisory Authority, for example, the Finnish Centre for Pensions (ETK), the Federation of Finnish Financial Services (FK) and the Finnish Pension Alliance (TELA) also publish special statistics concerning the insurance industry. The Federation of Finnish Financial Services and the Finnish Pension Alliance chiefly publish their statistics on the Internet. In addition to the Finan-

The Insurance Companies 2010

8 (8)

cial Supervisory Authority, only the Federation of Finnish Financial Services publishes insurance line-specific statistics. Some of the statistics are based on disparate sources. Hence, the same statistical term can refer to different content in different statistical publications or be based on information produced at different times.
